

Phase 6: Project Testing

6.1 Introduction

The **Project Testing Phase** focuses on testing the complete ServiceNow Incident configuration developed in the previous phase. The UI Policy, UI Policy Action, and Client Scripts are tested to ensure that they work correctly and meet the project requirements.

6.2 UI Policy Testing

The **High Impact Control** UI Policy is tested by changing the Impact value on an Incident.

- Set **Impact = High**.
- Verify that **Assignment Group becomes mandatory**.
- Verify that **Urgency becomes read-only**.
- Change Impact to Medium or Low.
- Confirm that the normal field behavior is restored.

6.3 Client Script Testing

The three Client Scripts are tested individually.

Client Script	Test	Expected Result
Auto set urgency for high impact	Set Impact to High	Urgency is automatically set to High
Prevent save if Assigned To missing	Save High-impact Incident without Assigned To	Save is prevented and error message appears
Prevent state change via list edit	Edit State from Incident list	Change is prevented and alert is displayed

6.4 Form Testing

The Incident form is tested to confirm that all configured behaviors work together.

- Select High Impact and verify the required field controls.
- Confirm that Urgency is automatically updated.
- Verify that Urgency cannot be manually changed.
- Try saving without Assigned To.

- Provide Assigned To and save again.
- Confirm that valid Incident records can be saved successfully.

6.5 List Testing

The Incident list is tested to verify the **onCellEdit Client Script**.

- Open the Incident list.
- Attempt to change the State directly.
- Confirm that an alert message is displayed.
- Verify that the State value remains unchanged.
- Open the Incident form and confirm that State can still be changed normally.

6.6 Test Results

Test Case	Expected Result	Status
Impact set to High	Assignment Group becomes mandatory	Pass
Impact set to High	Urgency becomes read-only	Pass
Impact set to High	Urgency automatically becomes High	Pass
Assigned To is empty	Incident submission is prevented	Pass
Assigned To is provided	Incident can be saved	Pass
State edited from list	Change is prevented	Pass
State edited from form	Change is allowed	Pass
Impact changed from High	Normal field behavior restored	Pass

6.7 Expected Outcome

The testing confirms that the UI Policy, UI Policy Action, and Client Scripts work together as expected. The project successfully provides **automation, validation, field control, and user feedback** for High-impact Incidents.

All major test cases are successfully completed, and the configuration is ready for the **Final Demonstration and Project Conclusion Phase**.
