

Phase 7: Project Documentation Phase

7.1 Introduction

The **Project Documentation Phase** focuses on recording the complete ServiceNow Incident project configuration, development process, testing results, and final outcomes. Proper documentation provides a clear reference for understanding, maintaining, and demonstrating the project.

7.2 Configuration Documentation

The important configurations implemented in the project are documented, including:

- **UI Policy:** High Impact Control
- **Condition:** Impact = 1 – High
- **UI Policy Action:** Urgency becomes read-only
- **Assignment Group:** Mandatory for High-impact Incidents
- **onChange Client Script:** Automatically sets Urgency to High
- **onSubmit Client Script:** Prevents saving when Assigned To is empty
- **onCellEdit Client Script:** Prevents State changes through list editing

7.3 Script Documentation

All Client Scripts are documented with their purpose, type, field, and functionality.

Client Script	Type	Purpose
Auto set urgency for high impact	onChange	Automatically sets Urgency to High
Prevent save if Assigned To missing	onSubmit	Validates Assigned To before submission
Prevent state change via list edit	onCellEdit	Prevents State changes from the list

The scripts are included in the project documentation so that their functionality can be reviewed and maintained easily.

7.4 Testing Documentation

The results of the Project Testing Phase are recorded in the documentation. Test cases include:

- High Impact field behavior.
- Assignment Group mandatory validation.
- Automatic Urgency update.
- Assigned To submission validation.
- State list-edit restriction.
- Restoration of normal field behavior when conditions change.

The expected and actual results are documented to provide evidence that the project works correctly.

7.5 Screenshots and Evidence

Relevant screenshots are collected and included in the project documentation as evidence of successful implementation.

The screenshots may include:

- UI Policy configuration.
- UI Policy Action configuration.
- Client Script configurations.
- Incident form with High Impact selected.
- Assignment Group mandatory indication.
- Urgency read-only behavior.
- Validation error message.
- State list-edit alert.
- Successful Incident submission.

7.6 Final Documentation

The final project document contains the following sections:

1. Project Introduction
2. Requirements and Objectives
3. Project Development
4. Project Testing
5. Project Documentation
6. Configuration Details
7. Client Script Details
8. Test Results
9. Screenshots and Evidence
10. Project Conclusion

This provides a complete record of the development and testing activities performed in ServiceNow.

7.7 Expected Outcome

The expected outcome of this phase is a **complete and organized project document** containing the configuration details, scripts, testing results, screenshots, and final observations.

The documentation provides a clear reference for the project and helps demonstrate that the ServiceNow Incident configuration was successfully developed, tested, and verified.
