

Phase 8: Project Demonstration Phase

8.1 Introduction

The **Project Demonstration Phase** focuses on demonstrating the completed ServiceNow Incident project and showing how the configured UI Policy, UI Policy Action, and Client Scripts work in real-time. The demonstration verifies that the implemented features satisfy the project requirements.

8.2 Demonstration of UI Policy

The **High Impact Control** UI Policy is demonstrated on an Incident record.

- Open an Incident record.
- Set **Impact = High**.
- Show that **Assignment Group becomes mandatory**.
- Show that **Urgency becomes read-only**.
- Change Impact to Medium or Low.
- Verify that normal field behavior is restored.

8.3 Demonstration of Client Scripts

The three Client Scripts are demonstrated using appropriate Incident scenarios.

Client Script	Demonstration	Expected Result
Auto set urgency for high impact	Set Impact to High	Urgency is automatically set to High
Prevent save if Assigned To missing	Submit without Assigned To	Submission is prevented
Prevent state change via list edit	Edit State from list	Change is rejected

8.4 Demonstration of Validation

The validation features are demonstrated by performing both valid and invalid operations.

- Try to save a High-impact Incident without Assigned To.
- Verify that the error message is displayed.

- Enter an Assigned To value and save the Incident.
- Confirm that the Incident is saved successfully.
- Attempt to change State from the Incident list.
- Verify that the alert is displayed and the change is prevented.
- Change State through the Incident form and confirm that the update is allowed.

8.5 Demonstration Results

The demonstration confirms that:

- High-impact Incidents are identified using the Impact field.
- Assignment Group is required for High-impact Incidents.
- Urgency is automatically set to High.
- Urgency becomes read-only when required.
- Incomplete High-impact Incidents cannot be submitted.
- State changes through list editing are prevented.
- Valid changes through the Incident form are allowed.

8.6 Expected Outcome

The expected outcome of this phase is a successful demonstration of the complete ServiceNow Incident project. All major features are shown working together, providing **automation, validation, controlled field behavior, and improved Incident data management**.

The successful demonstration confirms that the project is ready for the **Final Conclusion Phase**.
